UNIVERSITY OF MINNESOTA

Wireless Cities... Community Context Conference

October 6-7, 2005

University of Minnesota

The purpose of the conference is to provide a forum for the exchange of information and ideas on community-centered services delivered over municipal wireless networks.

Municipal wireless networks are being planned and implemented across the nation and the world. This conference will address the use of wireless networks to improve existing community services and innovate new collaborative content for local communities. It will act as a catalyst to engage government, industry and community organizations on how such content would impact public collaboration in the arts, humanities, journalism, education, social networks and other value-added community programming.

The University of Minnesota is an equal opportunity educator and employer.

Disability accommodations will be provided upon request. Please call 612-624-9510.
